Nutritional Support
for Patients with Cancer

Patient Education Tailored to Help Patients Manage Their Symptoms

Difficulty Swallowing

Cancer treatments, particularly those targeting the head & neck, can damage cells, & make it difficult to swallow.

Mouth Sores

Chemotherapy and radiation therapy eliminate rapidly growing cells, including the healthy cells that line the inside of the mouth. This can result in oral sores & infections.

Taste Changes

Cancer treatments may affect taste receptors in the mouth & alter the sense of taste & smell. Certain cancer treatments may also cause a bitter, metallic taste.

Wounds & Incisions

Proper healing of surgical incisions and other wounds are important, especially during treatments. Cancer treatments can make it difficult to maintain good nutrition, which may slow wound healing.

Weight Loss

Cancer and cancer treatments put stress on the body that may cause loss of muscle and appetite, leading to weight loss.

Fatigue

Treatments can be very draining on the body, leading to fatigue.

Nausea & Vomiting

Nausea and vomiting can be caused by treatments especially chemotherapy. Dehydration reduced nutrition intake & digestive system issues can occur, as a result.

Diarrhea

Treatments may damage the gastrointestinal tract, causing diarrhea. Diarrhea can lead to dehydration & reduced absorption of nutrients.

Meal Planning Assistance Tailored to Oncology Patient Goals

Weight maintenance during cancer treatment

Choose foods high in protein

Eat whole grain and fiber-rich carbohydrates

Eat healthy fats

Eat non-starchy vegetables high in vitamins, minerals, & fiber

Drink 6 to 8 cups of water every day

(800) 858-8386 *506

Tips for Eating Healthier:

- Eating the right kinds of foods before, during, and after cancer treatments can help you feel better and stay stronger.
- Stick to an eating schedule so you eat even when you aren't hungry.
- Include protein-rich foods with every meal and be sure to eat them first.
- Eat smaller meals regularly including protein-rich foods, whole grains and high-fiber foods, low-fat dairy products, and non-starchy vegetables.
- Pack snacks with you to eat in between meals.
- Avoid foods high in sugar – be mindful of added sugars and limit to 30g or less per day.
- Get protein from foods like eggs, chicken, and cottage cheese.
- Keep water or another beverage with you all day to stay hydrated and possibly add extra calories to your diet.
