Tuesday, June 21, 2022 from 7:00-8:00PM

A Breakthrough Every Week

Cancer Research in Our Community

Discussion topics include:

- How patients can benefit from the latest science
- Enrolling in clinical trials and finding the right treatment
- Genetics, immune therapy, killer cells, new drugs
- More cures, less side effects, better lives

Dr. Salwitz

"I chose to pursue the field of oncology because it gave me the opportunity to help and change the lives of people with cancer. I am compelled to cancer care, as my patients inspire me to change my community, one person at a time. I strive to take the role of a caring teacher and resource for you and your family, and I hope to provide balance, courage, and safety throughout your entire cancer journey. I ensure that every appointment is guided with a calm and supportive environment, and hope to offer realistic hope for the future."
